Network for female scientists at the KIT

KARLSRUHE INSTITUTE OF TECHNOLOGY

We are ...

- an open network of female scientists and engineers working in research and administration at the KIT
- women with different specializations and diverse career paths
- women in different age groups and positions

We want ...

- to form a network all across the KIT
- encourage women to get involved in science, research and development or research management
- ask women to contribute their experience, their creativity and commitment to our network
- keep in touch with our alumnae

We are active ...

- in various committees and working groups within the KIT
- through mutual support
- for increasing the participation of women on all hierarchical levels
- since 1993, with an annual open house for senior female high school students „job profiles of female natural scientists“

We offer ...

- an e-mail list for information regarding funding, training, job positions, etc.
- monthly meetings alternately as working group meeting and regulars' table
- insights into the diverse professional fields of female scientists through visits to workplaces at the KIT
- a wealth of experience for mutual support
- and now and again something special

We look back ...

on nearly 25 years of active network work for women:

- 1991 founding of a network for female scientists at the then nuclear research center
- 1992 election of a female representative for the working group "work and family"
- from 1992 participation in the further development of training opportunities for women
- 1995 founding member of working group "Women in the Research Centers" of the Helmholtz Association
- from 1995 participation in the organizing committee of the Helmholtz meetings on equal opportunities
- 1997 hosting of the Helmholtz meeting "Women in Research" in Karlsruhe
- 1998 appointment proposal of the first female executive officer for equal opportunities in the current large-scale research sector
- from 2004 representation in the daycare center commission
- from 2009 (founding of KIT) development of the network in direction of a KIT-wide network
